

Sustainability Policy 2018

Here at Enigma Fit-Out Solutions we care about the environment and sustainability for our children and our children's, children. **OUR FUTURE TOGETHER.**

Buying Materials

We always source products from sustainable sources such as the FSC and PEFC.

Sustainability in Design

As and where possible Enigma will design our in-house fabricated and manufactured products into a modular format, this keeps waste to an absolute minimum.

FSC Chain of Custody Certification

FSC Chain of Custody system allows the tracking of FSC certified material from the forest to the consumer. This method can show the company's commitment to the environment and responsible forest management.

Only companies that have the FSC chain of custody certification are allowed to use the FSC trademarks and labels on their products.

Benefits of FSC Certification

It provides added value to your product, giving it a verifiable social and environmental quality.

It demonstrates that you take the environmental concerns of your customers and staff seriously.

It assists with continued market access in an increasingly environmentally aware sector.

PEFC Chain of Custody Certification

PEFC Chain of Custody certification is the ability for tracking certified materials from the forest to the final product. This ensures that the wood, wood fibre or non-wood forest products in a certain product can be traced back to its certified forest.
